01/01/16

Total duration of award in years

4.0

The project/programme is most relevant to:

Alzheimer's disease & other dementias

Keywords

dementia care | caregivers | allied health | residential care | mental health services

Research Abstract

In residential aged care many people with dementia experience disturbing behavioural problems such as wandering, aggression or sleep disturbance. Not only the person with dementia but also other residents, family and staff find these symptoms disturbing. This study will adapt and trial a structured staff training program from Sweden to reduce behavioural problems in people with dementia, improve wellbeing for the person with dementia and give staff better skills to care for residents.
