

Contributions of amino- and dipeptidyl-peptidases-mediated truncations of amyloid peptides to Alzheimer's disease: a combined cellular and in vivo approach

<https://neurodegenerationresearch.eu/survey/contributions-of-amino-and-dipeptidyl-peptidases-mediated-truncations-of-amyloid-peptides-to-alzheimer%20s-disease-a-combined-cellular-and-in-vivo-approach/>

Principal Investigators

CHECLER Frédéric

Institution

IPMC, UMR7275 CNRS/UNS

Contact information of lead PI

Country

France

Title of project or programme

Contributions of amino- and dipeptidyl-peptidases-mediated truncations of amyloid peptides to Alzheimer's disease: a combined cellular and in vivo approach

Source of funding information

Fondation Plan Alzheimer

Total sum awarded (Euro)

€ 104,000

Start date of award

xx/xx/2015

Total duration of award in years

2

Keywords

Research Abstract
