Total sum awarded (Euro)

€ 400,163

Start date of award

01/01/16

Total duration of award in years

5.0

The project/programme is most relevant to:

Alzheimer's disease & other dementias

Keywords

dementia care | hospitals | rural and remote health services | regional health | education

Research Abstract

This research concerns the evidence-based development, national administration, and systematic evaluation of a targeted online dementia education intervention among clinical staff in regional and district hospitals. The research aims to improve knowledge of dementia among clinical staff, enhance patient outcomes, and reduce costs by addressing four outcome levels: clinical learning needs, learning outcomes, engagement and behaviour change, and organisational performance.
