Title of project/programme

Improving the acute hospital care experience from admission through to discharge for older patients with cognitive impairment and their carers / families.

Source of funding information

NIHR

Total sum awarded (Euro)

€ 259,359

Start date of award

01/04/14

Total duration of award in years

4.0

The project/programme is most relevant to:

Alzheimer's disease & other dementias

Keywords

Cognitive impairment

Research Abstract

The aim of this research is to improve the care experience of older patients with cognitive impairment and their carers/families whilst in acute hospitals. This will be achieved by: 1) reviewing the literature on best practice in care of older people with cognitive impairment, 2) a qualitative study looking in depth at several cases in a local hospital to find out what contributes to a positive and a negative patient experience, 3) developing and evaluating a toolkit for use by acute Trusts 4) active participation of two bespoke involvement groups throughout the study (Consumer Reference Group and Expert Reference Group).
