Principal Investigators

Dr Ryusuke Takechi

Institution

Curtin University of Technology

Contact information of lead PI Country

Australia

Title of project or programme

Restoration of cognitive deficits induced by diabetes through the modulation of cerebrovascular integrity

Source of funding information

National Health and Medical Research Council

Total sum awarded (Euro)

€ 177,488

Start date of award

01/01/2016

Total duration of award in years

3

Keywords

Research Abstract

Diabetes is a known risk factor for the development of dementia. However the details of this association have not been known. Recent evidence consistently shows that the integrity of blood vessels in the brain may be central to the onset of dementia, and consistently, damaged brain blood vessels are often reported in diabetic patients and animal models. This project is the first to target in restoring the integrity of those brain blood vessels in order to reverse diabetes-

associated dementia.
