Title of project or programme

SMN immunogene therapy for motor neuron disorders

Source of funding information

National Health and Medical Research Council

Total sum awarded (Euro)

€ 402,170

Start date of award

01/01/2016

Total duration of award in years

3

Keywords

Research Abstract

We have designed novel gene therapy agents to treat MND. This therapeutic approach uniquely combines gene therapy agents with antibodies which stimulate motor neuron health and connections to muscle. This project will comprehensively characterise the therapeutic effects of our novel gene therapy agents in MND mice. We predict that our gene therapy complexes will improve motor neuron survival, motor function and lifespan in MND mice.
