Country

- Netherlands

Source of funding information

Netherlands Organisation for Health Research and Development (ZonMw)

Total sum awarded (Euro)

880000

Start date of award

1-9-2010

Total duration of award in months

48

The project/programme is most relevant to

- Alzheimer's disease and other dementias

Keywords

Dementia, Shared Decision Making

Research abstract in English

The project is a longitudinal qualitative study in which 20 health care networks of people with dementia are interviewed three times over transitions that occur in healthcare and the decision making here. This results in a model of SDM in the practice of care networks of people with dementia and in the development of a competency and a best practice description on the process support of SDM by case managers.

Lay Summary

In which category does this research fall?

- Health and social care research
